Countries can achieve both by reducing premature deaths. The broad benefits generated by mass campaigns, ongoing improvements in infant and early childhood mortality, and a phased impact of the expansion of primary health care in rural areas on adult survival prospects after the mid-1970s are demonstrated.

To what extent are reproductive decisions driven by the perceived benefits of obtaining postsecondary education? Moreover, the connection between population and consumption indicates that per capita scale-effect adjustments should be used for certain indicators. Table 3-3 footnote 2 At birth was selected for comparability with other research on health-adjusted life expectancy. Therefore, an index value of 0.
