## IUPAP: 1998 Conference Proceedings

Work on carbon-dioxide molecular lasers and solid-state infrared photodetectors including photoconductive copper-doped germanium and photovoltaic lead-tin telluride; use of these components in infrared heterodyne laser radars.

## Archives West: Walter Brattain family papers, 1860

The chief field of Brattain's research was the surface properties of solids, as well as research directed at 1 thermionic emission and absorbed layers on tungsten, phospholipids bylayers or membranes rectification and 2 photo effects at semiconductor surfaces ergo, cuprous oxide, silicon and germanium.
