Macromolecules

Experience with different materials has shown that tissue growth into the interstices of the biomaterials aids healing and integration of the material with host tissue after implantation. The 83 rd Prague Meeting on Macromolecules - Polymers in Medicine 2019 will focus on the latest innovative development in drug delivery systems. In this review, the polymers that exhibit no to very low degradation in aqueous and biological environments will be covered.

How polymers are changing the composition of medical equipment

The mechanical properties of photoresponsive polymers can be manipulated by different types of light sources, light dosages, and photoinitiators.

Smart polymers for cell therapy and precision medicine

The level of all contributions was high, the participation well qualified, and the meeting interesting and hopefully pleasant. Handle with care under the fume hood only and wear gloves when using it. GelMA is one of the most popular photoresponsive biomaterials because of convenient synthesis, biocompatibility, printability, and the translational results from in vivo experiments to realize cell therapy and precision medicine.

How polymers are changing the composition of medical equipment

In addition, the open valve must minimize disturbances to blood flow as blood passes from the left ventricle of the heart, through the valve and into the ascending aorta of the arterial vascular system.

Polymer in Medicine

Remove the beaker from the heat.
