Rehabilitation of Patients with Hemiplegia Using Deep Learning Techniques to Control a Video Game

Slide your hands forward until both elbows are straight.

REHABILITATION OF THE HEMIPLEGIC PATIENT

Similar to other forms of paralysis, hemiplegia exhibits significant loss of sensation and control in the affected parts of the body, which is often accompanied by intermittent pain. There may be multiple causes for hemiplegia. The total score that can be obtained from SS-QOL varies between 49-245.

Hemiplegia and Hemiparesis After Stroke

Traditional approaches to stroke recovery have a focus on neuro facilitation or neuro developmental techniques NDT to inhibit excessive tone, stimulate muscle activity if hypotonia is present and to facilitate normal movement patterns through hands-on techniques. This is key to recovery. Consequently, effective use of a walking assist robot has become a new patient rehabilitation skill.

Treating Hemiplegia and Hemiparesis After Stroke

In case of partial loss of sensation, there may be unusual sensations or tingling on the affected side. However, other causes such as alternating hemiplegia can have serious consequences due to repeated attacks.

Upper Extremity Robotic Rehabilitation in Patients With Hemiplegia

Followed by, Circuit training reaching in sitting and standing, sit-to-stand, step-ups, heel lifts, isokinetic strengthening, walking over obstacles, up and down slopes. The more you move your affected side, the more you stimulate neuroplasticity as your brain attempts to be efficient with moving those muscles again.
