Lack of actual deflection value from the site can be problematic to ensure the

Notes: Includes bibliographical references
This edition was published in 1977

This paper will give insight on economic feasibility of biogas production from municipal food waste for electricity generation to be utilized in existing and new township. The novelty of the research is developing preforms using chopped natural fibers using hydroentanglement process and the ability to combine these natural fibers with low melting point PA 12 leading to obtaining high strength composite without compromising the structural integrity of the kenaf fibers.
