Journal of the Royal Statistical Society, 176 2 , 431—457. Participation in higher education in Australia: equity and access.

Report summary: Social Class and Higher Education

According to Clancy, you can read the most recent report two ways - in absolute or relative terms. The Students' Union also provide financial assistance to students experiencing economic hardship - please for details. Widening Participation Trinity sets out its commitment to an inclusive university community with equality of access for all in Section A1.

Less inequality through universal access? Socioeconomic background of tertiary entrants in Australia after the expansion of university participation

The profitable results of education also are a target priority for students from different ethnic groups, of senior age and with occupational entry eligibility. Inequality from generation to generation: the United States in comparison.

Less inequality through universal access? Socioeconomic background of tertiary entrants in Australia after the expansion of university participation

Decomposing socioeconomic background effects into primary and secondary has practical implication. This underpins the rationale for shifting

resources from equity policies at later stages of education systems to early-childhood institutions or to improving parenting capabilities in lower-status families. Influencers Preceding development of knowledge and family history can act as a decisive factor of enrolling into an institution of higher education, meaning that people involved in education can have different impacts on the decision course.

Less inequality through universal access? Socioeconomic background of tertiary entrants in Australia after the expansion of university participation

They are deemed to be empirically and theoretically better proxies of family background than geographical postcode measures traditionally used in Australian studies of social inequalities Lim et al. The paper investigates the economic benefits and costs of higher education as these are perceived by higher education candidates and labour market entrants in Cyprus.

The economic benefits of higher education in Cyprus: The expectations of prospective students

In the model, independent variables parental occupation and education, type of secondary school and its geographical location, gender determine academic ability mediator variable , which in turn influences the post-secondary educational pathways of individuals. Lower social class groups represent 28 per cent of the total entrants to full-time undergraduate study, a lower share than their 39 per cent in the UK population as a whole. In terms of horizontal dimension of access, differences in probability of enrolling in a non-elite university have decreased only, and not substantially, between individuals with highly educated parents and their counterparts, and between private and public secondary school students.
