### Building a Fence Gate : 6 Steps (with Pictures)

Anyway, the needed moisture comes from the surrounding soil and gets superstrong. Did you stain or paint the common framing lumber? Because my situation is, my door will open inwards but I will install the boards on the outer side.

Make sure your tops are level and equidistant to the measurements taken at the bottom.

#### How to Build a Fence

Checking for buried utilities like you point out is a MUST, given the proximity to your electric meter, but I would add that you should also mark your lawn any sprinkler lines you might have - I speak from personal experience! You might want to lay them out. But knowing that wood moves with changes in the weather and can bend under constant weight.

#### How to Build a Fence

So lay out the boards on the ground and get an idea of where you can fudge things. You simply break the inner catalyst, squish it around for a few minutes then pour it around the post base in your post hole.

#### How to Build a Fence

Spray paint parallel lines on the ground to indicate the gate placement. Tamp the gravel using the bottom of the post or a tamper. If you have buried utilities where you live, you need to call the buried utility authority and have them come out and mark any buried lines, and then follow any guidelines they provide regarding excavation.

Amazing DIY Pallet Fence 6. Make sure you do a little at a time to ensue squareness before final tightening. You then screw it onto the INSIDE of

the gate with lots and lots of screws, long enough to go thru the plywood and a goodly distance into the 2x4's.

### **How to Build a Fence**

Will there be any problem if i install the boards opposite where the door opens? You can keep adjusting, as needed. Under normal circumstances you will only need one angled brace for a gate like this, the bottom of which should sit next to the bottom hinge, and this brace should ideally keep the gate from sagging over time.
