In Java, this is possible through the TestContainers library, which supports JUnit tests that bring up and automatically tear down Docker containers required during the integration test flow. What Can I Build with JavaFX? It user hardware-accelerated graphics and media engines that help Java take advantage of higher-performance clients and a modern look-and-feel and high-level APIs for connecting to networked data sources. I also don't know if the NetBeans Platform Maven plugins work with eFX or if you have to use Ant.
