## Simple Radio

Radio aurora includes the so-called afternoon radio aurora which produces stronger but more distorted signals and after the Harang-minima, the late-night radio aurora sub-storming phase returns with variable signal strength and lesser doppler spread. . High Frequency 3—30 3,000,000—30,000,000 Hz 100—10 m ionospheric refraction.

## Radio Revolten Anna Raimondo

Frequencies above 3 MHz were regarded as useless and were given to hobbyists. This is due to changes in the refractive index of air with temperature and pressure. MASP is known not only for its excellent collection of European and national paintings, sketches, and sculptures by Renoir, Picasso and Modernist Brazilian authors, but also for the modern architecture of its building, whose exhibition room is made of a single block of concrete and glass windows suspended and supported by two vertical concrete columns so the view of 9 de Julho Avenue and the

Cantareira mountain range north of here is not spoiled.
