Physicians may eagerly talk with patients about making changes — only to become disillusioned when patients do not follow through. Physician-based activity counseling: intervention effects on mediators of motivational readiness for physical activity. Theories were included if they formulated hypotheses about behaviour change maintenance.

**Theories of Behavior Therapy: Exploring Behavior Change**

This model of meal design encourages patients to visualize their plates split into the following components: 50 percent fruits and non-starchy vegetables, 25 percent protein, and 25 percent grains or starchy foods. Tobacco use, poor diet, physical inactivity, poor sleep, poor adherence to medication, and similar behaviors are prevalent and can diminish the quality and length of patients' lives.
