Lesson 12: Accommodating Gifted Students

It has been marching north through Italy, laying waste to one community after another. The information available is only what was suspected at the time—that foul vapors carried the disease through the air, for example, instead of fleas. In addition, some may become disruptive.

Online Middle School Gifted & Talented Program

In this unit, students are placed in the role of engineers whose job is to select new, innovative options for energy production. Each unit consists of a Teacher Manual of detailed instructions on how to implement the unit and a student Problem Log, in which the students find necessary materials for the unit and also where they record their work.

Academics

While searching for a solution to the problem, students simultaneously develop a deep understanding of a variety of subjects and improve their skills in research, higher-order thinking, decision making, and more.

Truth

The foundation of Fit to Print is the issue of journalistic responsibility.

Gifted and Talented

They complete lessons that help them assess the level of risk they face, determine when the plague might arrive in their town, and consider what might happen if it does.

Tips for Teaching Gifted Students

Parents can be powerful partners, and they are often vocal advocates. They explored injuries and medical treatment, and they learned about everything from amputation to infections.

Ideas for Independent Projects for Gifted Young Students

Students are placed in the role of members of a recovery team whose job it is to assess whether Fort Collins, Colorado, is an appropriate site to reintroduce ferrets that were bred in captivity.

Study Gifted Education

Challenging Studies To keep gifted middle school students engaged, teachers deliver ongoing challenges with work at increasing degrees of difficulty and complexity, plus the support necessary for students to be successful. The basic format involved in such an investigation would be as follows: 1 selection of a topic of interest and a problem related to that topic, 2 review of literature related to the problem, 3 acquisition of the skills necessary to investigate the problem fully, 4 development of tentative solutions to the problem, and 5 the creation and presentation of a product which reflects these tentative solutions and what the student has learned.
