With the rise in global demand for oil and fast depletion of easy reserves, the search for oil is directed to more difficult areas — deepwater, arctic region, hostile terrains; and future production is expected to come from increasingly difficult reserves — deeper horizon, low quality crude. The co-author of 11 leading textbooks in the areas of management science, production and operations management, statistics, and mathematics, Professor Williams has been a consultant for numerous Fortune 500 companies and has worked on projects ranging from the use of data analysis to the development of large-scale regression models. He has published his research in Science, Management Science, Operations Research, the INFORMS Journal on Applied Analytics, and other professional journals.
