### Headache

Referring clinicians often struggle with selecting the appropriate imaging test, in part because of the large number of available imaging options and gaps in the teaching of radiology in medical schools. Diagnostic errors may cause harm to patients by preventing or delaying appropriate treatment, providing unnecessary or harmful treatment, or resulting in psychological or financial repercussions.

### Spinal cord injury without radiographic abnormality

These models suggest that clinicians make diagnoses and choose treatments by matching presenting patients to their mental models of diseases or information about diseases that is stored in memory.

### Headache

We buy a new car based on excellent reviews and tend to ignore or downplay negative features that are noticed. A noncontrast CT scan is usually sufficient, except for complicated acute sinusitis e. Medical Decision Making 29 5 :E22—E29.

### Radiologic Imaging in the Management of Sinusitis

Retrieved from Bajwa, Zahid H. FDA will issue targeted requirements for manufacturers of CT and fluoroscopic devices to incorporate equipment features that will provide clinicians with more information to guide their decision making.

### Cushing's Disease

CAP College of American Pathologists. This initial pattern matching is an instance of fast system 1 processing. Hemorrhagic stroke Hemorrhagic stroke occurs when a blood vessel in your brain leaks or ruptures.

## **Radiologic Evaluation of Chronic Neck Pain**

After 30 minutes the patient reported significant improvement in her headache and remains without neurologic symptoms. However, the novel acronyms were not generally accepted and the more general term SCIWORA is usually used to describe all variants of clinico-radiological mismatches. There are many heuristics and biases that affect clinical reasoning and decision making see for medical and nonmedical examples.

## **Patient perceptions of communication with diagnostic radiographers**

Bone window views provide excellent resolution and a good definition of the complete osteomeatal complex and other anatomic details that play a role in sinusitis. Limitations of applying summary results of clinical trials to individual patients: The need for risk stratification.

## **MRI technique detects evidence of cognitive decline before symptoms appear**

DRLs are neither dose limits nor thresholds. They can often be measured, and this measurement can be central to diagnosing a medical problem. If you do not agree to the terms and conditions, you may not access or use the software.
