### **Salmonella Enteritidis in shell eggs: Current issues and prospects for control**

The Salmonella growth profiles seen in naturally contaminated eggs are different from those seen in eggs contaminated artificially. To address these issues, this research aims to: 1 identify the legal, social and ethical issues of pharmacogenomic research involving children through an analysis of relevant legislation and guidelines at the international, regional, national, federal and provincial levels and of the relevant literature; 2 conduct qualitative interviews of researchers in the field of pharmacogenomics to identify the most challenging issues; 3 carry out an in depth study of the issues identified in 1 and 2. The two are not unrelated or accidental.
