Chapter 23. Modifying Access, Barriers, and Opportunities

Some institutions and organizations seem to make rules just to make it harder for people to use their services or facilities.

Removing regulatory barriers to telehealth before and after COVID

Telehealth can also be useful in protecting elderly patients and medically vulnerable populations by facilitating interactions between providers and patients in safer environments. And, will telehealth practices be continued without the previously applied restrictions of state and federal laws, especially those around service reimbursement or parity agreements? In the beginning of the ACA's rollout, technical difficulties also hampered the rollout of online health-insurance exchanges in 2013.

Removing regulatory barriers to telehealth before and after COVID

The spectrum of home-based care As the health care system shifts toward additional care in the community, the spectrum of available services and supports for home-based care becomes critical. In these instances, existing applications, AI, and other emerging technologies are coordinated under the guise of telemedicine for complex treatments, like virtual assistants to help patients carry out treatment plans by sending reminders to take medications and providing relevant health information.

Regulatory barriers to home information services

As health care moves toward paying for value, not volume, home health agencies must coordinate patient care and ensure successful transitions from institutional care to the home. The following video on the obesity epidemic beautifully illustrates the importance of modifying access, barriers, and opportunities: What do we mean by modifying access, barriers, and opportunities? Having the right stakeholders i. Such variables in state administration contribute to differences among telehealth laws across states.

AHA Urges CMS to Remove Regulatory Barriers to Help Better Patient Care

Pooled audits, while useful, can also be challenging, as they require effective coordination between multiple FS firms with different resources, objectives and Cloud outsourcing models. Global Observatory for EHealth Series 2.

Removing regulatory barriers to telehealth before and after COVID

Undoubtedly, regulators as well as firms are still getting to grips with the Cloud technology, its risks, and the opportunities it presents for firms, the financial system, and for regulation and supervision.
