Strategic Freight Research Projects

BTS is withholding the scheduled release of the passenger and combined indexes for January.

US freight industry after COVID

The effects of globalization on domestic freight moderated. As an example, 3D printing may lead to decentralization of manufacturing and to the development of on-demand manufacturing, resulting in unforeseen demands on road infrastructure because of the growth in small truck freight trip generation. For-hire transportation consists of freight or passenger transport services provided by a firm to external customers for a fee.

Freight Transportation

With no clear time line for the lockdown and other restrictions to end, freight companies are responding to the immediate crisis by preserving cash, creating safe workspaces, adjusting the size of the workforce to meet current demand, and providing humanitarian aid. Its ultimate return to previous levels is unclear and could be affected by a reconfiguration of global supply chains, already underway because of the latest trade tensions; and new, pandemic-driven ideas about offshoring. The FreightWaves team of research analysts uses a variety of surveys and data modeling to develop proprietary information across specific modes of transportation, tailored specifically to C-suite level executives.

2021 Predictions for the Freight Transportation & Logistics Industry

With the late 2015 release of the FAST Act, TDOT must determine the impact new legislation has on its previous work and how to translate those efforts to plan, develop and implement cost effective and sustainable freight projects.
