Note, for instance, that the number of sentences in a natural-language conversation is limited and shows various logical interrelationships. The maximum conductances of the synapses were chosen from a Gaussian distribution with a SD of 70% of its mean with negative values replaced by values chosen from an uniform distribution between 0 and two times the mean. The idea is that they are all covered indirectly by our more general dimensions.

Applied to a self-learning, flexible system like AlphaGo, which is in part also capable of creativity, the blockhead objection seems implausible.

Right side depicts the dependency graph of the generative model, with blue circles denoting hidden causes that can be inferred.
