The authors present a variety of therapeutic interventions and techniques along with practical guidelines that have been designed to alleviate distress in those who stutter.

Stuttering

If you or your child stutters, it is important to work with a speech-language pathologist to determine the best treatment options. Approximately 5 to 10 percent of all children will stutter for some period in their life, lasting from a few weeks to several years. The book will be available for pre-sale in June 2021 and is scheduled for publication July 1, 2021.

a handbook on stuttering

We make speech sounds through a series of precisely coordinated muscle movements involving breathing, phonation voice production, and articulation movement of the throat, palate, tongue, and lips. Recent brain imaging studies have shown consistent differences in those who stutter compared to nonstuttering peers. This handbook is not intended as a complete ADA compliance manual; it is a resource for.
