

Diffuse endocrine system - from embryogenesis to carcinogenesis

Urban & Fischer - Autocrine vs Paracrine vs Endocrine: What are the Differences?

Description: -

- Carcinogenesis.

Neuroendocrinology.diffuse endocrine system - from embryogenesis to carcinogenesis

- Progress in histochemistry and cytochemistry -- v. 38, no. 2.diffuse endocrine system - from embryogenesis to carcinogenesis

Notes: Includes bibliographical references (p. 245-272).

This edition was published in 2003

Cells of the Disseminated Endocrine System

Telomeres are the caps on the end of chromosomes and help prevent the DNA from unravelling. All peer-reviewed accepted submissions meeting high research and ethical standards are published with free access to all.

A Medley of Potpourri: Endocrine system

By day 4, prostaspheres were solid and non-canalized with diameter averages of 30-40 μm . The profile of thermal cycle was as follows: 95°C for 2 minutes, 40 cycles of 95°C for 5 seconds, and 60°C for 30 seconds, followed by dissociation curve analysis for all primer pairs. In adult myometrium, the expression of the estrogen-responsive gene calbindinD K and the progesterone receptor were reprogrammed in females exposed to DES at days 3 to 5 pre-implantation and days 10 to 12 organogenesis but not in those exposed at days 17 to 19 late fetal period.

Telomerase and the endocrine system

Paracrine is local, so signaling molecules are destroyed rapidly if not taken up by the local target cells. The articles are high standard and cover a wide area.

Carcinogenetic mechanisms of endocrine disruptors in female cancers (Review)

As representatively shown for the 48-week-old mice , Tg-Foxe1 animals had enlarged thyroids with irregular surface and visible nodules.

The diffuse endocrine system: from embryogenesis to carcinogenesis

The patient was euthyroid, the most typical clinical picture accompanying goiter. While FACS is widely used for prostate stem cell research, there are several disadvantages of cell sorting including a relative low cell yield, need of multiple stem cell markers, and cell damage following labeling and sorting. In 1993 Wolff et al observed that the risk of breast cancer was higher among women with high serum concentrations of DDE, the major metabolite of DDT, compared with women with low levels.
