African Elephant Facts for Kids

Developing crop protection teams and ensuring that the viable elephant corridors remain open grasslands rather than being cultivated are proven strategies as well. They can also run faster than you would expect, easily reaching speeds of 40 mph, which is a lot faster than us humans can run. The male elephant takes no part in the care of the calf, and leaves after mating.

About Elephants

Elephants attain their maximum stature when they complete the fusion of long-bone , occurring in males around the age of 40 and females around the age of 25. Elephants are sensitive and complex social animals who seek the companionship of other elephants, preferably their own families.

ADW: *Loxodonta africana*: INFORMATION

They often are labelled as bioengineers. Bulls only return to the herd to breed or to socialize, they do not provide prenatal care to their offspring but rather play a fatherly role to younger bulls to show dominance. African forest elephants feed more heavily on fruits, seeds, leaves, bark, and branches.

ADW: *Loxodonta africana*: INFORMATION

The ears of African elephant are larger and resemble the shape of the African continent, while Asian elephants have smaller, rounder ears, according to the San Diego Zoo. Vegetation is typically sparse, though spectacular blooms may occur following rain. However, during the dry seasons when food is less abundant, they will be more flexible with what they consume.

What Kind of Habitat Do Elephants Live in?

African forest elephant groups are less cohesive than African bush elephant groups, probably because of the lack of predators. Ivory in China China's domestic ivory ban came into force at the start of 2018; a move with the potential to significantly reduce ivory consumption in China and reverse devastating poaching in Africa. Zentralblatt für Mineralogie, Geologie und Paläontologie.

African Forest Elephant

Malaysia is consistently used by traffickers as a transit hub for illegal ivory shipments inbound to Asia from Africa, with Customs authorities continuing to make regular seizures of ivory alongside other illegal wildlife products. Elephant, family Elephantidae, largest living land, characterized by its long trunk elongated upper lip and nose, columnar legs, and huge head with temporal and wide, flat ears. Less than a third of the population of female elephants will be in estrus at any given time and gestation period of an elephant is long, so it makes more evolutionary sense for a male to search for as many females as possible rather than stay with one group.
