An experimental and theoretical study of the ice accretion process during artificial and natural icing conditions

The IBHS hail collections—diameter, area, mass, and terminal velocity calculated from the $Re-X$ relationship developed here—are used to derive KE D. Before a ski can slide, it must overcome the maximum value static friction.

Icing Tunnel

The coefficients of the five charge transfer versus temperature fits were then themselves fitted to third-order polynomials of ELWC.

Ice Adhesion on Superhydrophobic Coatings in an Icing Wind Tunnel

Northern European Overture to War, 1939—1941: From Memel to Barbarossa. Each has a designation with code and detailed description.

Snow

The mass increase was determined from the size of the molten ice particles measured by a microscope and the initial size of the unrimed frozen spherical drop. Levinson, Comparison of LEWICE and GlennICE in the SLD Regime.
