Multimetric diatom index of coastal habitat quality Field, microscopy This indicator uses broad taxonomic and functional characteristics of the diatom assemblage to rank a site within the range of habitat disturbance low to high in U.

Protecting the Great Lakes

As co-chair of the Aquatic Nuisance Species ANS Task Force, along with the National Oceanic and Atmospheric Administration, the Service provides technical and financial assistance to the ANS Great Lakes Regional Panel to help States develop ANS management plans and to support prevention, control and outreach activities in the region. In FY 1996, due to a mid-year budget agreement, the GLNPO pollution prevention grant process was suspended.

Lake Erie, Western Basin Aquatic Vegetation data

Managers began to implement policies and practices that carefully minded the environment and the quality of the water around them. The amount of water entering and leaving the lakes each year is less than one percent of the total in the lakes. EPA Administrator William Reilly and the Great Lakes governors on April 12, 1991, the action plan served as a snapshot of ongoing activities and launched a number of new activities.

USGS Ground water in the Great Lakes Basin : the case of southeastern Wisconsin

As the Lake Erie example in Ohio demonstrates, when the EPA asserts its authority, it can catalyze a long-overdue impairment listing and TMDL plan.

Funding for preventing toxic and nuisance algae

The evidence is derived from a ground-water flow model recently constructed for southeastern Wisconsin by a team of hydrologists.

DEC releases report on restoration and protection of New York's Great Lakes

The updates will ensure the Action Agenda reflects emerging challenges, new science, and innovative approaches in order to address the most pressing issues within our Great Lakes communities and ecosystems. Metropolitan areas are more common in the southern basin.

A Call to Action on Combating Nonpoint Source and Stormwater Pollution

This dangerous form of mining threatens to destroy pristine fish habitat, poison drinking water sources, and pollute the Great Lakes.
