Hydrogen Applications

Among other applications, it is important to point its use as raw material in the chemical industry, and also as a reductor agent in the metallurgic industry.

Materials

Question 13 Name: a an oxidizing agent that does not contain oxygen.

Uses Of Hydrogen

Using the electronic configurations, explain how magnesium atom combines with oxygen atom to form magnesium oxide by transfer of electrons.

Important Question for Class 10 Science Metals and Non

Nitrogen gas is slightly lighter than air and slightly soluble in water. State reasons for the following observations: i The shining surface of some metals becomes dull when exposed to air for a long time.

Hydrogen

Materials suitable down to -100 °C Low carbon, 3. At room temperature and pressure, hydrogen exist as a diatomic gaseous molecule.
