Pteranodon Facts and Figures

Pteranodon had a small body, compared with the large size of its wings and head. Later, King was shown to present a danger to a -wearing by diving into him with his strong, sharp-pointed beak, challenging said suit's defenses to the point that King claimed he would split his foe in half upon impact something he ultimately failed at due to the suit proving too durable.

Pteranodon Facts and Figures

Marsh and Edward Drinker Cope. Still, Pteranodon most likely soared rather than flapped its wings because it was so large. It also may have helped Pteranodon to steer while in flight.

Pteranodon

Its head had a massive crest at the back of the skull.

Pteranodon

The Pteranodon dwelt along the Western Interior Seaway, an ocean channel that would eventually become dry land in western North America.

20 Pteranodon Facts for Kids and Dinosaur Enthusiasts

Additionally, the full Beast Form as displayed by King is notably big, several times larger than an average-sized human though it is worth noting that King is already much larger than normal people in his humanoid form. The combination of great flight speed, strength, and size conferred by the transformation allows the user to cause notable damage to whatever they fly into beak-first, both to objects and living beings, their beak representing a strong and sturdy pointed weapon.

Pteranodon

No weaknesses are currently known of this ability beside the standard Devil Fruit weaknesses. Most researchers believe this pterosaur was

primarily a glider, though it's not inconceivable that it actively flapped its wings every now and then, and the prominent crest on top of its head may or may not have helped stabilize it during flight.

Pteranodon

However, the Pteranodon is not actually a dinosaur, but a pterosaur. When flying into the , such midair collision with a flaming kick in the anime knocked the enormous ship back with enough force to throw off herself.
