### Humans are still evolving: 3 examples of recent adaptations

Because they are the simplest animals to possess them, their ancestors were very probably the first animals to use nerves and muscles together. If the GC changes are harmful, natural selection would normally oppose them. And the first really human fossils we find about 200,000 years ago.

### Human evolution is still happening

And maybe they could hibernate in some way. The earliest fossils of human ancestors have been found in Africa.

### 12 Theories of How We Became Human, and Why They're All Wrong

Besides Neanderthals, anatomically modern humans co-existed with a third species of Homo called Denisovans. However, its small canine teeth were very human-like and its body stood on two legs. In this system, modern humans are classified as Homo sapiens.

### Human Evolution

After tens of thousands of years confined to a single continent, our ancestors colonized the globe.

### Human Evolution: A Timeline of Early Hominids [Infographic]

Hunting and gathering seem to have been the primary methods of food gathering. Sarah A Tishkoff, Floyd A Reed, Alessia Ranciaro, Benjamin F Voight, Courtney C Babbitt, Jesse S Silverman, Kweli Powell, Holly M Mortensen, Jibril B Hirbo, Maha Osman, Muntaser Ibrahim, Sabah A Omar, Godfrey Lema, Thomas B Nyambo, Jilur Ghor, Suzannah Bumpstead, Jonathan K Pritchard, Gregory A Wray, and Panos Deloukas, 2007, Convergent adaptation of human lactase persistence in Africa and Europe.

### Human Evolution, Timeline, History, And Stages 1 C

Problematically, it would be rash to assume that thick tooth enamel is exclusive to humans and, more importantly, CT scan technology hasn't actually managed to capture a distinct enough image of the femoral neck to comment on cortical bone morphology Wood, 2005. Whether the

genus Homo first emerged remains unclear.

### **human evolution**

That's our best guess for when we, as human beings, had a common ancestor with the chimpanzees.
