Majority of Humanity Say We Are Not Alone in the Universe

Of those, two-thirds are from the United States. Is there anyone out there? The Holy Spirit, the togetherness of all consciousness, is the Universal God, but by being such an abstract idea people have tended to forget, and revert to more humanized types of gods. He suggested that some planets evolve selective pressures that guide evolution toward different characteristics.

Why We Search

Very minimal wear and tear.

Extraterrestrial life probably exists. How do we search for aliens?

© 2021 Advance Local Media LLC. Whitmire's calculations are depressing not only in regard to ETs, but also to ourselves, since they suggest that ours is a very short-lived species and we'll take out everything else on the planet as we leave. Retrieved April 4, 2014 from

We Are Not Alone: The Search for Intelligent Life on Other Worlds by Walter Sullivan

Several of these planets orbit G dwarfs - the same species of star as our own sun. Since the Earth will be able to support life for another billion years, that means that the planet could, potentially, produce 23 more species like us. Those Entities have been watching us and visiting periodically our Planet.

Is there Intelligent life on other Planets?

Please be aware that the disclaimer appearing on this page does not apply to these linked sites. One seeing all this, you could see that this is so advanced that if it eccelerate, it will dessapear within a blink of eye. It's sad, pathetic and it isn't in the spirit of scientific endeavour.

Extraterrestrial life probably exists. How do we search for aliens?

Matthews, 4 May 2020, The Astronomical Journal. When Drake wrote his equation in the 1960s, the value for L was thought of as the time between when a civilization discovered atomic energy and when that society managed to destroy itself through nuclear annihilation, Stanley said. We have accomplished a lot in our relatively short time on Earth.

The Odds of Intelligent Life in the Universe

European Journal of Social Psychology, 38, 977—997.
