Climate Friendly Farming

More studies are needed to identify the implications of climate change for additional cropping systems and locations within the region. Shorebird Management Plan: Northern Pacific Coast Regional Shorebird Management Plan. These reduced flows will require more tradeoffs among objectives of the whole system of reservoirs, especially with the added challenges of summer increases in electric power demand for cooling and additional water consumption by crops and forests.

Climate Friendly Farming

Climate Dynamics, 38, 527-546, doi:10. Confidence Level Impacts on Forests Evergreen coniferous forests are a prominent feature of Northwest landscapes, particularly in mountainous areas. Explore how climate change is affecting the Northwest.

Northwest

Assessment of confidence based on evidence and agreement or, if defensible, estimates of the likelihood of impact or consequence The observed effects of climate on fires and insects combined with the agreement of future projections across modeling efforts warrants very high confidence that increased disturbance will increase forest mortality due to area burned by fire, and increases in insect outbreaks also have very high confidence until at least the 2040s in the Northwest.

Northwest

Longer term, to end of century, models project crop losses from temperature stress to exceed the benefits of CO 2 fertilization. Some species may be able to change behavior or take advantage of cold-water refuges.

Northwest

The qualitative comparative risk assessment underlying the key messages in the Northwest chapter was informed by the Northwest Regional

Climate Risk Framing workshop December 2, 2011, in Portland, OR. Impacts on infrastructure, natural systems, human health, and economic sectors, combined with issues of social and ecological vulnerability, will play out quite differently in largely natural areas, like the Cascade Range or Crater Lake National Park, than in urban areas like Seattle and Portland Ch. Consequences and Likelihoods of Changes Courtesy of NOAA Reservoir systems have multiple objectives, including irrigation, municipal and industrial use, hydropower production, flood control, and preservation of habitat for aquatic species.

Northwest

For subalpine forests, what those forests become instead of subalpine forests is highly uncertain — different climate models used to drive the same dynamic global vegetation model agree about loss of subalpine forests, but disagree about what will replace them.

Northwest

There is uncertainty in economic assessment of the impacts of hydrologic changes on the Northwest because much of the needed modeling and analysis is incomplete. Kresge Grantees and Practitioners Workshop On Climate Change Adaptation, 12. Maloy, 2010: The combined effects of ocean acidification, mixing, and respiration on pH and carbonate saturation in an urbanized estuary.
