Lattice deformation of blue halite from Zechstein evaporite basin: Klodawa Salt Mine, Central Poland

Hibsch-Erläuterungen zur geologischen karte der umgebung von Böhm. It is worth pointing out that X-ray single crystal diffractometry performed for the selected solid state inclusions from blue halite crystals led us to distinguish mineral phases such as sylvite, carnallite, othorhombic sulfur, quartz, anhydrite, polyhalite and pyrite Stadnicka and Zelek. Characterization of optical filters with two-dimensional confinement.
