Maternal and neonatal effects of substance abuse during pregnancy: our ten

You can also call 1-800-QUIT-NOW 1-800-784-8669 for free support. Int J Dev Neurosci 22: 261—271. Eur J Pharmacol 509: 155—159.

The Effects of Alcohol and Drugs of Abuse on Maternal Nutritional Profile during Pregnancy

Some clinical studies have also suggested an increased prevalence of heart defects, autonomic dysregulation, nystagmus, and strabismus in children exposed prenatally to opiates. These findings bolster the clinical evidence that prenatal nicotine exposure alters long-term learning and memory function. Thus, moderate alcohol exposure during fetal development produces significant neurobehavioral consequences;,;;;;, and FASDs currently represent the leading cause of mental retardation in North America, ahead of Down syndrome and cerebral palsy.

What are the effects of maternal cocaine use?

Marijuana exposure during development may also result in increased likelihood of drug experimentation later in life.

Drug abuse in pregnancy and neonatal effects (1977 edition)

Drug Alcohol Depend 41: 119—126. Effects of prenatal exposure to cocaine on the developing brain: anatomical, chemical, physiological and behavioral consequences.

About Opioid Use During Pregnancy

As with its parent drug METH, further studies on prenatal AMPH exposure is needed to better understand effects from prescribed AMPHs or non-medical users. Am J Med Genet C Semin Med Genet 127C: 28—34 A seminal review on the effects of prenatal alcohol on growth demonstrating an interaction between the environment and prenatal exposure.

The Effects of Alcohol and Drugs of Abuse on Maternal Nutritional Profile during Pregnancy

For example, children from the MHPCD cohort presented with signs of depression as early as 10 years of age.

Effects of unconventional recreational drug use in pregnancy

Maintenance agonist treatments for opiate-dependent pregnant women.
