# Prefeasibility study of potential groundwater development in Kelantan, Malaysia.

## University of Birmingham - UMEXPERT

Description: -

-Prefeasibility study of potential groundwater development in

Kelantan, Malaysia.

-Prefeasibility study of potential groundwater development in

Kelantan, Malaysia.

Notes: Thesis (Ph.D) - University of Birmingham, Dept of Geological

Sciences

#### Hydrogeochemistry and groundwater quality assessment of the multilayered aquifer in Lower Kelantan Basin, Kelantan, Malaysia

Soil Investigation and Downhole Logging at UEDA Plating M Sdn Bhd Client: UEDA Plating M Sdn Bhd, Shah Alam, Selangor Project Status: Completed April 2017 10. In simple terms, it is the management of a river basin as an entity, not as a series of individual, unconnected pieces. To date, he has published more than 80 journals in ISI-ranked publications and has been granted 2 patents.

## Salinity mapping of coastal groundwater aquifers using hydrogeochemical and geophysical methods: a case study from north Kelantan, Malaysia

The considerable chloride ion content initially suggests that the salinity of the groundwater in the second aquifer is probably caused by the intrusion of seawater.

## Current Project (International & Malaysia)

Ismail is adept in administrative duties as well.

## **UMEXPERT**

In: Ward SH ed Geotechnical and Environmental Geophysics, vol II: Environmental and groundwater applications. Continual expansion of population density, urbanization, agriculture, and industry in most parts of the world has increased the generation of pollution, which contributes to the deterioration of surface water quality. The main facies in the shallow aquifer were Ca—HCO 3 and Na—HCO 3 water types.
