Often, incineration plants consist of several separate 'boiler lines' boilers and flue gas treatment plants, so that waste can continue to be received at one boiler line while the others are undergoing maintenance, repair, or upgrading.

# Throughput limitations and pressure relief of the OSUR (Onsite Uranium Recycle) semiworks off

Atomic Energy Commission, and United States. Beryllium determinations show deviations from accepted chemical values of approximately 5 and 8 percent for the spark and arc methods, respectively.

In an effort to prepare and better plan for the next phase of the uranium market, mineral resources will need to be brought up to modern resource estimation standards to be readily available when their need arises. The principal minerals containing thorium and uranium are zircon, monazite and xenotime. According to , waste incinerators reduce the amount of some atmospheric pollutants by substituting power produced by coal-fired plants with power from waste-fired plants.
