Reviews of Modern Quantum Chemistry is a joint endeavor, in which renowned scientists from leading universities and research laboratories spanning 22 countries present 59 in-depth reviews. Agricola De Re Metallica XII, 1556 It all started very practically like seen at left - it was only sometimes later that all those abstractions started. The history of quantum chemistry also goes through the 1838 discovery of by , the 1859 statement of the problem by , the 1877 suggestion by that the energy states of a physical system could be discrete, and the 1900 quantum hypothesis by that any energy radiating atomic system can theoretically be divided into a number of discrete energy elements  $\epsilon$  such that each of these energy elements is proportional to the  $\nu$  with which they each individually radiate and a numerical value called.
