Weather Conditions Drive Dynamic Habitat Selection in a Generalist Predator

If you zoom in on a detailed view of weather patterns from the day of the hailstorm, you can quickly get an idea of which specific areas were hardest hit, and which were likely to have experienced lighter damage or no damage at all. For example, a major source of nonorographic waves are the tropical oceans. Although clients may not, in principle, perform an active scan on these frequencies, we have noticed that the behaviour of clients can trigger the DFS.

INTRODUCTION TO DYNAMIC METEOROLOGY SOLUTIONS MANUAL

If no signal was detectable around a nest location, we systematically searched the surrounding area was for signals in increasing radius until the owl was found.

Dynamic Meteorology

It has also been pointed out that functional responses may appear as spurious results from statistical habitat selection analyses that are misaligned to the underlying behavioural processes of choosing habitats from availability, e. F in , as it varied as a combined quadratic function of wind strength and temperature Fig. The overarching theme is the multiscale couplings among all these processes that need to be represented in weather and climate models.

Dynamical meteorology : an introductory selection (Book, 1981) [styleguide.expo.io]

At a critical layer, the wave is dissipated absorbed , resulting in a divergence of wave stress and a deceleration or acceleration of the wind. We suspect that grazed PA and moist areas were increasingly used with increasing temperatures due to temperature related differences in prey availability between these and alternative habitats.
