What are the possible values of X, and what are the probabilities associated with each value? Hint: Use an argument similar to the one used in Example 1e.

Introduction to Statistics

We have shown that the Poisson distribution with parameter np is a very good approximation to the distribution of the number of successes in n independent trials when each trial has probability p of being a success, provided that n is large and p small. If the probability of rain tomorrow is α, what is the probability that the satellite system will function? The result was a working within a cellular automaton with a small neighborhood only those cells that touch are neighbors; for von Neumann's cellular automata, only cells , and with 29 states per cell.
